

Revision Games — 1.5 Legal, Moral, Cultural & Ethical Issues

OCR A Level Computer Science H446 — Component 01, Section 1.5 (1.5.1 legislation; 1.5.2 moral/ethical/cultural/social impact)

Loop cards (dominoes)

A closed loop of 15 cards. Each card has an **ANSWER** (top) and the **next CLUE** (bottom). Hand them out, pick any starter, read the clue aloud; whoever holds the matching answer reads next. The chain returns to the start.

How to play 1. Print and cut out the 15 cards. Shuffle and deal them all. 2. One player reads the **CLUE** on the bottom of any card. 3. The player whose card **ANSWER** matches that clue reads it out, then reads *their* clue. 4. Continue until the loop closes back to the first card. If it doesn't close, a match is wrong — find it.

#	ANSWER (top)	CLUE (bottom — read this aloud)
1	START	The law covering how organisations collect, store and process personal data
2	Data Protection Act 2018 / GDPR	The body that enforces UK data protection law and can issue large fines
3	The ICO (Information Commissioner's Office)	The principle that you must not keep personal data for longer than necessary
4	Storage limitation	The person an item of personal data is about
5	The data subject	The role of the organisation that decides <i>why and how</i> personal data is processed
6	The data controller	The 1990 Act that makes hacking and unauthorised access illegal
7	Computer Misuse Act 1990	CMA Offence 1 — this is the basic offence of doing this without permission
8	Unauthorised access	CMA Offence 3 — the offence of doing this to programs or data (e.g. ransomware)
9	Unauthorised modification	The 1988 Act protecting original works, software, music and designs
10	Copyright, Designs & Patents Act 1988	Unlike copyright, this protects an <i>invention</i> and must be applied for and granted
11	A patent	Permission from a rights-holder allowing you to use their protected work
12	A licence	The 2000 Act governing how public bodies may intercept communications
13	RIPA 2000 (Regulation of Investigatory Powers Act)	The gap between those who have access to technology and skills and those who don't
14	The digital divide	When an AI system reproduces or amplifies unfairness from its training data
15	Algorithmic bias	Loops back to START — the law covering how organisations collect, store and process personal data

Verification: clue on card n points to the answer on card $n+1$, and card 15's clue returns to card 1's answer (Data Protection Act). Closed loop of 15.

Taboo cards

One player describes the **TERM** without saying any **BANNED** word (or an obvious form of it); the team guesses. 30 seconds each.

How to play 1. Print and cut out the 8 cards; shuffle into a pile face down. 2. The describer takes the top card and gets their team to say the TERM aloud. 3. They may **not** say the TERM or any BANNED word (or close variants). Opponents watch for slips. 4. Score 1 per correct guess in the time limit; pass if stuck.

TERM: Computer Misuse Act 1990 BANNED: hacking · unauthorised · access · 1990

TERM: GDPR BANNED: data · personal · Europe · protection

TERM: Copyright BANNED: copy · music · licence · steal

TERM: Patent BANNED: invention · apply · protect · idea

TERM: RIPA 2000 BANNED: intercept · communications · police · surveillance

TERM: Digital divide BANNED: access · gap · internet · poor

TERM: Automated decision-making BANNED: computer · decide · human · algorithm

TERM: E-waste BANNED: rubbish · environment · recycle · electronic

Scenario card sort

Sort the 10 scenario cards under the **four laws**: Data Protection Act / GDPR · Computer Misuse Act 1990 · Copyright, Designs & Patents Act 1988 · RIPA 2000.

How to play 1. Lay out four header cards (the four Acts). Print and cut the 10 scenarios. 2. In pairs, place each scenario under the law it breaches. For CMA cards, also call out which **offence** (1, 2 or 3). 3. Reveal the answer key. Discuss the one card where **two laws** could apply.

Scenario cards - **A.** A firm sells its mailing list to advertisers without any lawful basis or consent. - **B.** A games studio's source code is copied and released by a rival without permission. - **C.** An employee uses a colleague's login to snoop on files but changes nothing. - **D.** A police force intercepts a suspect's phone calls without the required authorisation. - **E.** A user uploads pirated films to a streaming site for others to download. - **F.** A hacker breaks into a server and deletes the company's records out of spite. - **G.** A hospital leaves patient records on an unencrypted, publicly accessible drive. - **H.** A criminal gains access to a network in order to plant spyware and steal banking logins. - **I.** A company keeps job-applicant CVs indefinitely with no reason to retain them. - **J.** Someone uses a band's song in a commercial advert without buying a licence.

Answer key — scenario card sort

Card	Correct law	Note / offence
A	Data Protection Act / GDPR	No lawful basis / consent for processing
B	Copyright, Designs & Patents Act 1988	Copying software/source code without a licence
C	Computer Misuse Act 1990 — Offence 1	Unauthorised access, nothing modified
D	RIPA 2000	Interception by a public body without authorisation
E	Copyright, Designs & Patents Act 1988	Distributing copyrighted works (piracy)
F	Computer Misuse Act 1990 — Offence 3	Unauthorised modification (deletion)
G	Data Protection Act / GDPR	Breach of integrity & confidentiality (security)
H	Computer Misuse Act 1990 — Offence 2	Access <i>with intent</i> to commit a further offence (theft). <i>Could also engage the DPA against the bank/holder.</i>
I	Data Protection Act / GDPR	Breach of storage limitation
J	Copyright, Designs & Patents Act 1988	Using a work commercially without a licence

Quick-fire "Which law / which issue?"

Read the clue; first correct answer scores. Answers in **bold**.

How to play 1. Quizmaster reads a clue aloud. Players buzz or write the answer. 2. Award 1 point per correct answer; for CMA clues, require the offence number too where shown.

1. The Act about unauthorised access to computer systems. → **Computer Misuse Act 1990**
2. The Act about protecting original works, music and software. → **Copyright, Designs & Patents Act 1988**
3. The Act about how organisations handle personal data. → **Data Protection Act 2018 / GDPR**
4. The Act about public bodies intercepting communications. → **RIPA 2000**
5. CMA offence: releasing ransomware that encrypts files. → **Offence 3 (unauthorised modification)**
6. CMA offence: hacking a bank in order to steal money. → **Offence 2 (access with intent)**
7. CMA offence: using a friend's login to look around, changing nothing. → **Offence 1 (unauthorised access)**
8. The ethical issue: machines doing tasks once done by humans, risking job losses. → **Automation / workforce displacement**
9. The issue: the gap between those with and without tech access and skills. → **Digital divide**
10. The issue: AI reproducing unfairness from its training data. → **AI / algorithmic bias**
11. The environmental problem of discarded electronics and toxins. → **E-waste**
12. Unlike copyright, this protects an invention and must be applied for and granted. → **A patent**
