

Homework — 1.5.1 Computing Related Legislation

Name: _____ Date: _____ Mark: _____ / 20

OCR H446 — set after the 1.5.1 lesson.

Part A — This week's topic (~14 marks)

1. For each scenario, write in the table the **full name (and year)** of the Act that most directly applies. [2] (AO2)

Scenario	Act that applies
A nurse uses a colleague's still-logged-in workstation to look up a celebrity's medical records, purely out of curiosity.	
A start-up uses photographs copied from other people's websites, without permission, as the artwork in a paid mobile app.	
A company keeps the names and email addresses of everyone who downloads its app for ten years "just in case".	
Police obtain proper authorisation to intercept a suspect's phone calls during a serious-crime investigation.	

2. Complete the paragraph about the Data Protection Act 2018 using words from the word bank. Each item may be used at most once; **three** items are not needed. [3] (AO1)

Under the Data Protection Act 2018, the living individual whom personal data is about is the _____. The organisation that decides **why and how** that data is processed is the _____ — for a fitness app recording heart-rate data, this is the app company. A cloud-hosting firm that stores the data on the company's behalf is a _____. The Act's principles require that personal data is kept _____ than necessary, is accurate and kept _____, and is stored _____ to protect it against unauthorised access.

Word bank: data subject · data controller · data processor · data owner · no longer · indefinitely · up to date · securely · publicly

3. Complete the table: write True or False for each statement, and write a correction for every false statement. [3] (AO1/AO2)

Statement	True / False	Correction if false
Under the Computer Misuse Act 1990, accessing a computer system without authorisation is an offence even if nothing is changed or stolen.		
A program must be registered before it is protected by the Copyright, Designs and Patents Act 1988.		
Releasing software as open source means the developer gives up their copyright.		
The Data Protection Act 2018 applies to the personal data of living individuals.		
RIPA 2000 allows any police officer to authorise the interception of communications.		
Distributing a virus that deletes or alters files breaches the Computer Misuse Act's offence of unauthorised modification of computer material.		

4. A disgruntled IT technician, on their last day, writes a script that will delete the company's customer database at midnight after they have left. Identify the Act and the specific **offence** committed, and explain why it applies even though no access password was "stolen". [2] (AO2)

5. RIPA 2000 gives public authorities powers to intercept communications and to demand that encryption keys are handed over — but restricts *who may authorise* their use. **Discuss** whether these powers strike an acceptable balance between investigating crime and protecting individuals' privacy. Reach a justified conclusion. [4] (AO3)

Part B — Retrieval: keep it fresh (~6 marks)

6. (1.3.1) State **one** difference between **symmetric** and **asymmetric** encryption. [2] (AO1)

7. (1.4.2) State the order in which items leave a **stack** and the order in which items leave a **queue**. [2]
(AO1)

8. (1.2.4) State **one** advantage of writing a program in a **high-level language** rather than in **assembly language**. [2] (AO1)
