

Start Here — How to Use These Resources (OCR H446)

Welcome. Everything is organised the way the course is taught: **Component** → **Topic** → **Subtopic**. Here's how to find and use it.

Finding things

- Open your **Component** (1 Computer Systems, 2 Algorithms & Programming, 3 Programming Project).
- Open the **Topic** (e.g. *1.1 Processors, Input, Output and Storage*).
- Inside each topic:
 - **00 Topic Resources/** — whole-topic materials: **Knowledge Organiser**, **Revision Notes**, **Flashcards**, **Revision Game** (+ print-and-cut cards), **End-of-Topic Worksheet**, **Topic Mini-Paper**.
 - One folder per **Subtopic** (e.g. *1.1.1 ...*) containing:
 - **Lesson (PowerPoint)** — the taught lesson
 - **Revision Notes** — one-page summary of that subtopic
 - **Worksheet (+ ANSWERS)** — practice with space to write
 - **Homework (+ ANSWERS)**
- **Recap Checkpoints/** — cumulative papers that mix everything covered so far.

Every worksheet, quiz, homework and paper comes in two files: the **worksheet** (questions + answer space) and a **separate answer sheet**. An **editable Word (.docx)** version sits next to each print-ready PDF.

How to revise (the method that works)

1. **Learn** it — read the subtopic **Revision Notes** / Knowledge Organiser; watch the lesson.
2. **Recall** it — cover the notes and write down what you remember; drill the **Flashcards**.
3. **Practise** it — do the **Worksheet** and **Homework** *closed-book*, then mark against the answer sheet.
4. **Prove** it — sit the **Topic Mini-Paper**, then the **Recap Checkpoints** as they come up.
5. **Track** it — RAG-rate yourself on the **Personal Learning Checklist** (in *Teacher Toolkit*). Revise your Reds first, and **interleave** — keep re-testing older topics.

Where the exam marks are

- **AO1** (recall) is the easy half. **AO2** (apply to a scenario) and **AO3** (evaluate/justify/design) decide **A vs A***.
- So when you practise, focus on *applying* and *justifying*, not just defining. Always **show your working** on calculations, logic and algorithm traces.

Reference (course-wide)

The **Reference/** folder has the Glossary, Reference Sheet (number/Big O/logic/SQL), Command Words & AOs, Exam Technique, Common Mistakes, Diagram Bank and the Pseudocode Guide — use them

throughout.

Good luck — work actively, space it out, and keep re-testing. 🎓
